Key Insights & Recommendations

Key Insights and Recommendations

Summary :

Out of 1,470 employees, 237 left the company, an attrition rate of 16.12%. Attrition is not random. It is concentrated in specific groups and is driven mainly by overtime, early tenure, and low pay.

Key findings :

Overtime is the biggest driver of attrition. Employees who work overtime leave at 30.5%, compared with 10.4% for those who do not, and single employees working overtime leave at 49.6%.

Sales Representatives have the highest attrition of any role at 39.8%, followed by Laboratory Technicians at 23.9%.

The first two years are critical. Employees with 0-2 years at the company leave at 29.8%, and employees aged 18-25 leave at 35.8%.

Pay also matters. Employees earning under 3K leave at 28.6%, compared with 8.9% for those earning 10K-20K.

Poor work conditions increase risk: bad work-life balance (31.2%), frequent business travel (24.9%), and no stock options (24.4%). Pay appears equitable, with a gender gap under about 3% within each job level.

Recommendations :

Reduce overtime in high-risk groups and review workloads. Review the Sales Representative role, including pay, targets, and management support.

Strengthen onboarding and mentoring during the first two years. Review pay for the lowest income band and widen stock option eligibility.

Support frequent travelers, and monitor employees with low job satisfaction or poor work-life balance.
